
Changing Shape of Software Security in Digital Transformation

Suman Sourav

Director – DevSecOps, Vantage Point Security

ABSTRACT

Evolution of digital transformation and agile development has raised serious concerns on how organizations are dealing with the software security and its turning out that application security is no more an afterthought process. Security is being seen as a road blocker for the companies onboarding in this digital transformation journey. The software security issues raised by digital transformation team are driving the need for a better understanding between the organization's Information Security professionals, development teams and those who provide application security. "Traditionally, those groups don't speak the same language and don't understand what the other side is doing.

This session is focused on the challenges organizations are facing in software security and the strategic approach to solve those challenges, session will highlight few case studies from the leading organizations in SEA region on how they are achieving success on this journey and at last the areas need of research that can help organization to achieve business objectives without compromising the software security requirements.

SPEAKER'S BIO

Suman has more than a decade experience in designing secure-SDLC programs and is passionate about integrating security into the development lifecycle. He is skilled beyond existing static analysis tools and code review techniques and shaping the way the industry secures code in a Continuous Deployment world. He has worked with various financial and non-financial institutions to implement software security life-cycle and has strong experience of creating an organizational framework to break silos security culture in the organization and builds a unified approach to deal with the root cause of software security problems. Currently he is working with Vantage Point Security as an Application Security Program Director and helping clients in SEA region to implement application security program.
